HISTORY

Uma Racing brand begins in September 2002. The brand was established under Uma Racing Sdn. Bhd, a joint venture company between Meng Kah Auto Parts Trading Sdn Bhd (MKA) and Maju Motor Racing. Both parties are passionate and confident about the potential of high performance parts' market. The "Uma Racing" name is derived from the idea of "horse" which is related to speed and power.

Over the years, they fully concentrate on every aspect of a product from engineering to test ride. Uma Racing has discovered and developed many innovative products for motorcycle enthusiasts. With the introduction of the high cam and carburetor, it was exactly the moment Uma Racing created its success story. Quality and superior experience are the driving force for Uma Racing to create differentiation in the market.

The company focuses on extensive Research and Development to ensure that all customer requirements are met with exceptional quality for both road and motocross racing. In recent years, Uma Racing has successfully entered the competitive market in Singapore, Philippines, Thailand, Vietnam, Indonesia and Greece. Today, Uma Racing is one of the most recognized and admired brands in Malaysia and also South East Asia.

SUPER HEAD

Exclusively brings you the truly new innovative design of "Oval-Shaped Superhead". Made of high strength and ductility aluminium for high heat resistance. It helps to maximize engine performance by enhancing the air / fuel mixture flow.

Product Code	02H00070
Model	FZ150i / LC / LCES / LC4S / LC5S

AIR FILTER

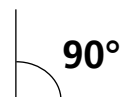

This quality air filter is engineered to deliver optimized air quality and provide the best overall performance and service life. It ensures the engine receives a sufficient volume of clean air to efficiently maintain the correct air/ fuel ratio and prevent premature engine wear. Design in a mushroom shape for maximum protection and optimum performance.

RACING AIR FILTER

Use high-flow technology to produce racing air filter in a cone shape. The racing air filter comes with a stainless steel clamp for a perfect fit. This innovative technical solution helps to optimize the flow dynamics of the direct air into the engine. It is race-tested for performance and reliability. The filter lets your motorcycle engine breathe easier to improve engine power and torque.

Size	35mm	38mm	48mm

ALUMINIUM & CYLINDER BLOCK KIT

Two types of quality block kits for enhancing high performance engines: aluminium and ceramic. Both materials are strong and durable. The aluminium cylinders are lined with a steel sleeve to provide a tough wear resistant surface for the piston rings slide against. The ceramic plated cylinder block kit is an alternative if you are looking for superior heat dissipation. Both block kits provide great increase in engine life.

BY PASS

Two models of bypass valve: 45 degree and 90 degree. Both models are produced in attractive finishing. It is made from high quality alloy under CNC machined technology for high strength and durability. The bypass valve is used to relieve pressure in the engine. By controlling the engine pressures, it can help the engine to run longer and work efficiently.

CARBURETOR ASSY

For Icon motorcycle enthusiasts, a range of high performance single carburetors is produced to suit your needs. It is made from high quality alloy for more strength and durability. Each carburetor comes with lightweight and compact body. The slide design enables the engine to respond much quicker than the conventional slide carburetor. It allows the air flows faster and smoother. The air fuel mixture will be more consistent, resulting in a noticeable performance increase.

CARBURETOR ACCESSORIES

INTAKE ADAPTOR

Product Code	02I00030
Size	24mm

The intake adaptors have been designed in several sizes to match the Icon bikes. It is made from heavy duty rubber material for strength and firmness. Construct of reinforced, temperature-resistant synthetic rubber.

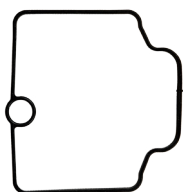

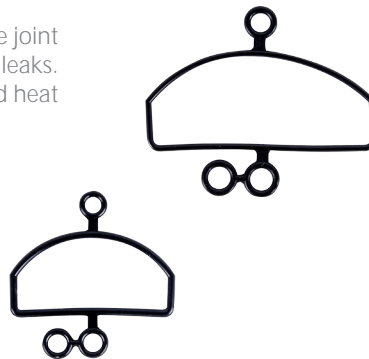

Product Code	Size
02I00040	28mm
02I00050	30 / 32mm
02I00130	34mm

CARBURETOR REPLACE OIL SEAL

This heavy-duty carburetor oil seal kit is used to seal the joint tightly between the two assembled parts to prevent leaks. Made from high quality rubber with good elasticity and heat resistance functions. It is also resistant to chemicals.

Product Code	Size
02O00010	21-28mm
02O00070	30-34mm

CARBURETOR BASE 'O' RING

The rings are manufactured by using high grade rubber for sturdiness and durability. This product matches all Icon bikes.

GASKET

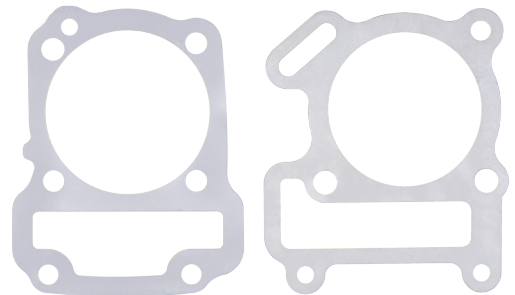

The cylinder gasket seals the combustion chambers as well as oil and coolant passages between the cylinder block and cylinder head. In high-performance engines, the head gasket is one of the most critical components. This aluminium cylinder gasket can avoid failure of the gasket and loss of performance.

GEAR BOX

For aggressive riders who want fast accurate gear changes and positive retention, this gear box component is definitely the best choice. The gear box set comprises of shafts and all loose gears. It is designed with high precision to meet the high stress. Each gear has strong and durable teeth that withstand high pressures and heat.

Product Code	02G00100
Model	RGS

STARTER GEAR

Featuring high strength steel construction, the starter gear is a heavy duty and durable replacement gear. Each gear is processed under high heat treatment. The teeth of the starter gear are hardened to increase their strength and wear resistant.

Product Code	02G00120
Model	Y125Z

ADJUSTABLE TIMING GEAR

Both OEM and modified camshafts, the adjustable timing gear enables fine tuning of the camshaft timing to maximize engine performance and tailor power characteristics for various riding conditions especially in racing use. It allows the gear changes quickly and accurately. It tunes the overall drivability and performance aspect of the motorcycle, resulting in increment of horsepower and torque.

IMC DIGITAL CDI

If you are looking for a better way to improve engine performance, IMC is definitely the right choice. It has an intelligent design of electronic circuit. This product interprets data using performance maps. There are four programmable mapping. It will surely offer you better accelerations and a more responsive ride.

PILOT JET

Pilot jet controls the fuel delivery during start-up and idling of your bike. It has a major influence on fuel flow from zero to 1/4 of throttle opening. The pilot jet kit comes with different jet sizes in a carryin case. This kit is great for the serious tuners who want the engines to run perfectly in all conditions.

IDLE SCREW

Main function of idle screw is to adjust the throttle plate(s) in order to increase or decrease the engine speed when idling. Specially designed for the Icon bikes to run smoother. With a proper adjustment, your engine should have steady idling. It will also help to improve the throttle response, fuel mileage, and reduction of emissions.

Product Code | 02I00120

AIR SCREW

The air screw is crafted from strong and durable steel. Each air screw is designed with a flat head screw that works with the pilot jet to supply mixture at low idle to the engine. It affects the engine, especially at initial starting and idling. The air screw is a great tool for carburetor fine-tuning adjustment.

Product Code | 02A00120

NEEDLE JET

A series of high grade jet needles are produced for Icon motorcycle enthusiasts. Made from high quality steel. It supplies fuel to the carburetor venturi from 1/8 to 3/4 of the throttle opening. Each jet needle comes with an adjustable clip. If adjusted properly, it will give your motorcycle powerful acceleration power.

Note: For countries other than Malaysia, please refer to page 36 & 37 for your country motorcycle models.

PISTON

FORGED PISTON - SET

Without Machining

A dedicated line of forging pistons is developed to fulfil the continual needs in the high performance motorcycle industry. These forged pistons are the best choice when strength and durability are prime considerations. Each forged piston is made by heating the aluminium alloy to below the melting point and forcing it into a mould under pressure (forging); result in a more ductile product.

AUTO SPORT CLUTCH SHOE

The auto sport clutch shoe assembly comes with three clutch shoes, three heavy duty springs, friction and driven plates. The short coil springs hold the friction and driven plates together through spring tension, preventing slippage. Each spring is heat treated for performance and durability. The plates are made from better friction material. This heavy duty clutch shoe assembly provides better grip on the flywheel.

Product Code	02C00110
Model	Ego / Ego S / Nouvo / Nouvo S

FORGED DRIVE FACE

Apart from the pulley, there are choices of pulley drive face. Made from high quality alloy under high-tech forging process. Each unit is hard-anodized for anti rust function. Since it has a smooth surface, it is ease of maintenance.

PULLEY ROLLER

Pulley weight rollers rotate against the pulley and it will wear out over time. For the replacement purpose, these pulley rollers have the properties of high temperature resistance, low friction coefficient and low wear rate. Highly recommend upgrading the roller before engaging in any performance upgrades.

HIGH CAM

The quickest way to significantly increase horsepower is to change the camshaft with a high performance profile. The higher the shaft lifts, the longer the valves opened for more air/fuel mixture. Highly recommended for highway speeding and racing use. Made with cast iron through CNC processing. It has the advantage of low noise, super hard and long service life too.

RACING MAGNETO

Motorcycle magnetos are great innovative products. These racing magnetos produce pulses in the ignition systems to generate power to the spark plugs. The product requires no battery and run independently. No wire connecting components are needed. It is a simple; yet powerful, clean and reliable product.

Product Code	Model
02M01050	SRL

VALVE

RACING VALVE

Racing valve acts as the gatekeeper for air to move in and out of the combustion chamber in a high performance motorcycle engine. These lightweight racing valves come in pair with an intake valve and exhaust valve. Each valve consists of a stem and a head. These high performance valves allow air flow smoothly from the cylinder to ignite the fuel which will drive the pistons up and down faster to increase engine speed.

TITANIUM VALVE STEM BASE

For racing and extreme applications, this heavy-duty replacement stem base is a must for any high performance engine. Each stem base is machined from aircraft quality titanium bar stock under computerized CNC machinery for maximum strength and durability. It is also a great way to lighten your valve train. By upgrading from steel to titanium valve spring retainers, you can gain the maximum speed and power.

SPRING

TORQUE SPRING

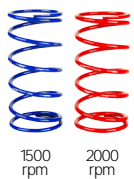

Many types of torque springs are available based on RPMs in different strengths and colour coatings. Designed to provide an angular return force. The torque spring stiffness related to engine power; the more power an engine makes, the stiffer the torque spring to prevent belt slippage. By using this torque spring, you will feel the effects of stiffer acceleration, less belt slippage, and solid throttle response.

CLUTCH SPRING

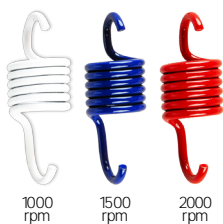

Clutch spring helps to isolate the transmission from the shock of the clutch engaging and dampen unwanted vibrations from the engine compartment. It squeezes the clutch plates together to make them grab and continuously holds the plates together through consistent spring tension for maximum power delivery. This product is stiffer and will reduce clutch slippage under extreme conditions.

AUTO CLUTCH SPRING

Made from the toughest materials available to exceed OEM performance and durability. It allows the engine to rev to a higher RPM before the clutch engages, delivering more punch and higher engine response. It also ensures a positive clutch lockup to reduce clutch slippage under extreme conditions.

VALVE SPRING

Each valve spring is manufactured from the best materials available to ensure exceptional performance, reliability, and quality. It safely accommodates high lifts and has superior resistance to load loss even under extreme operating conditions. The valve spring also increased valve train stability.

THROTTLE BODY KIT SET

Product Code	02T00060
Model	FZ150i

THROTTLE BODY KIT

In fuel injected motorcycles, throttle body is part of air intake system that controls the amount of air flowing into the engine's combustion chamber. This high performance throttle body kit is made from alloy under CNC process to enhance its durability. With more responsive throttle body kit, it promises delivery and improve fuel efficiency.

FUEL INJECTION CONTROLLER

Fuel injection controller is important for the optimum reliability and performance of your bike. The fuel injector provides the easiest and most accurate methods of tuning your fuel injected quad. It offers 3 user selectable base fuel curves that are designed to improve engine operation. It benefits the rider with smoother and more dependable engine response during quick throttle transitions.

THROTTLE VALVE

Made from high quality alloy for strength and durability. Each of the throttle valves has numbers on it that explains how much the cutaway is. The larger the cutaway, the leaner the mixture and the smaller the cutaway, the richer the mixture will be. Besides the single pieces, you can get it in full set too. The full set consists of three different valve sizes for you to tune the right mixture of fuel and air.

REED VALVE PETAL

Reed valve consists of flexible reed petals which restrict the flow of air-fuel mixture in a single direction. This wing shape design can improve the distribution of fuel-air mixture admitted to the cylinder at every speed and RPM. By using latest carbon technology, these petals are stiffer to allow the reed petals to respond quickly and accurately to changes in engine pressure.
